Art Unit: 3653

1. 35 U.S.C. 112, first paragraph, requires the specification to be written in "full, clear, concise, and exact terms." The specification is replete with terms which are not clear, concise and exact. The specification should be revised carefully in order to comply with 35 U.S.C. 112, first paragraph. Examples of some unclear, inexact or verbose terms used in the specification are:

page 8 Lines 14-17 inaccurate

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

4. Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Williams, et al in view of Gordon, et al and Nering, et al.

Williams et al disclose a substantially similar FOUP unloader in Fig. 8. Note clamp #124 and door remover #126. Williams et al lack screw actuation. Screw actuation is disclosed by element #72 of Gordon et al and by Nering et al. It would have

been obvious to a mechanic with ordinary skill in the art at the time the invention was made to provide the primary reference with screw actuation. The motivation is the known use of equivalent.

5. The remaining references are cited to show similar structure.
